Participant Information Sheet and Consent Form

Study: A Phase 1, Randomised, Dose-Escalation Study of the Safety and Tolerability of StudyDrugX in Healthy Adult Volunteers

Protocol: SDX-101 (synthetic) **Document version:** v2.0, dated 11 May 2026

Site: Southern Cross Research Institute, 15 Grey Street, South Brisbane QLD 4101

Principal Investigator: Dr Daniel Kowalski (MBBS, FRACGP)

Participant code: S027

1. What is this study about?

This study tests how safe StudyDrugX is and how well it is tolerated when healthy adults take it at two dose levels, 100 mg and 200 mg. It is the first time the drug is being given to people.

2. What will happen if I take part?

You will attend four visits about 14 days apart: a screening visit, two dosing visits where you take StudyDrugX at the clinic, and a follow-up visit. At each visit we will check your heart rate and blood pressure and take a blood sample for haemoglobin, white blood cell count, ALT (a liver enzyme) and creatinine (a kidney marker).

3. What are the possible risks?

Side effects reported with similar medicines include nausea, headache and mild skin rash. Medicines such as paracetamol, ondansetron or loratadine may be given at the clinic to treat these.

4. What has changed in this version (v2.0)?

Since the study began, some participants had a temporary rise in ALT, a liver enzyme, after their second dose. The protocol was amended on 11 May 2026: liver blood tests are now reviewed by the investigator before each dose, and an ALT result above the upper limit of normal (40 U/L) is repeated at the next visit. Participants who were already in the study were asked to sign this version.

5. How is my information protected?

Study records identify you by your participant code (S027). Your name appears only on this consent form, which is stored securely at the site. Staff who review study reports see the code, not your name.

6. Do I have to take part?

No. Taking part is voluntary and you may withdraw at any time without giving a reason. Withdrawing will not affect your usual medical care.

Consent Declaration

Participant code: **S027** Document version: **v2.0**

I confirm that:

[x] I have read this information sheet and had the chance to ask questions.

[x] I understand that taking part is voluntary and that I can withdraw at any time.

[x] I agree to provide blood samples at each study visit.

[x] I agree to my coded study data being used to monitor the safety of StudyDrugX.
